Everyone can be . . .
A Quick-Change Artist

with a Changepoint Pen

Anyone can change the pen point or change from fountain pen to the bank-approved ballpoint pen, or vice versa, in a matter of seconds.

Handsome, a pleasure to use, extremely economical—Changepoint Pen Sers have proved themselves under severe service in all types of business. These pens were primarily designed to withstand the hard usage to which they are subjected on public writing desks.

Changepoint, Inc.

122 N. Madison

Tulsa 20, Oklahoma

Changepoint is now supplying you refills of an improved design which hold half the quantity of ink, and sell for half the price of our former refills. These refills will give you the following advantages:

1. The equivalent of two writing tips for the same quantity of ink as in our former refills, resulting in uniform, finer writing qualities.
2. No tip-bleeding and malfunctioning because of age; There is a tendency toward these faults in the large tube refill because of the increased wear on both the rotating ball and the socket in which it rotates.
3. No tip-bleeding due to weather conditions.
4. No failure to write because of air pocketed in the ink column. This pocketing of air does not occur in a properly filled tube of the size we are now using, but does occur in a large tube such as we formerly used unless a grease follower is used. (NOTE: Changepoint has been unable to obtain license to use this patented process.)
5. No back-leaking: The ink will contain itself without sealing in a tube of the I. D. of our new refill.
6. No receding ball tips: This situation cannot occur with our present construction.
7. Finally, you will be able to use your refills down to the last drop of ink, resulting in more economy, because there will be no worn out tips and no dried out ink.

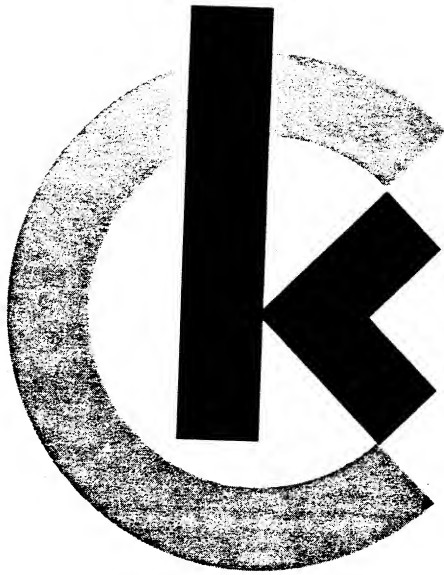

We have given months' of consideration to this change, and we sincerely believe that you will have economical, trouble-free, pleasant writing from these new refills.

KERR-*Changepoint*

bank equipment to your specifications—using standard components

Desk Frames are constructed of aluminum through the use of Heli-arc welds and hidden mechanical fastenings, with a true lustrous satin brushed surface. Applied over this surface is a durable epoxy thermosetting finish cured at 350°. Standard surface colors are clear for natural aluminum, brass, architectural bronze, stainless steel, black and medium bronze duranodic. Please SPECIFY

Desk tops are laminated plastic over particle board with square self edges. Finished thickness is 1¼". All popular laminate patterns available. Please SPECIFY

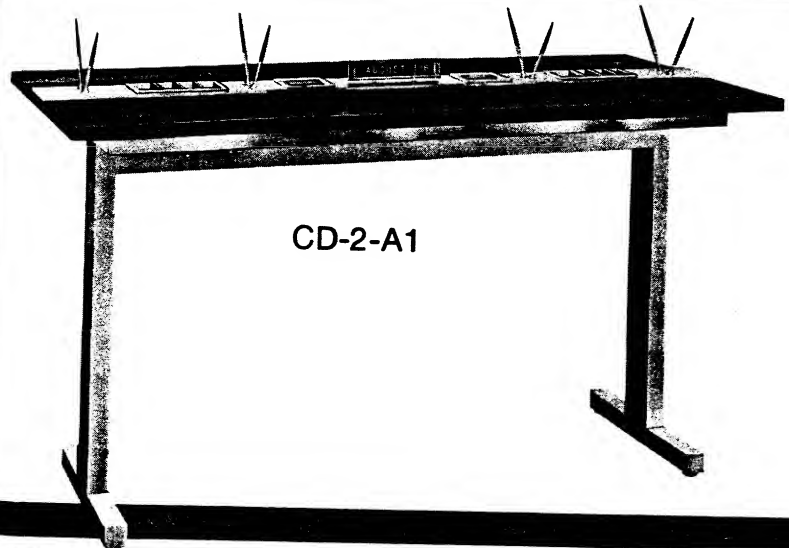

CHECK DESKS

basic desk

The following illustrates a "Basic Desk" meaning, standard frame and top assembled together under standard specifications.

Choose the basic desk of your preference, then add the accessory arrangement most suitable. This constitutes a complete desk ready to place in use.

For custom fixture manufacturers, we have offered a basic frame only, fully assembled or in a knocked-down (K-D) condition to be assembled after shipment. This enables the custom manufacturer to implement a fully custom design top to a standard metal frame.

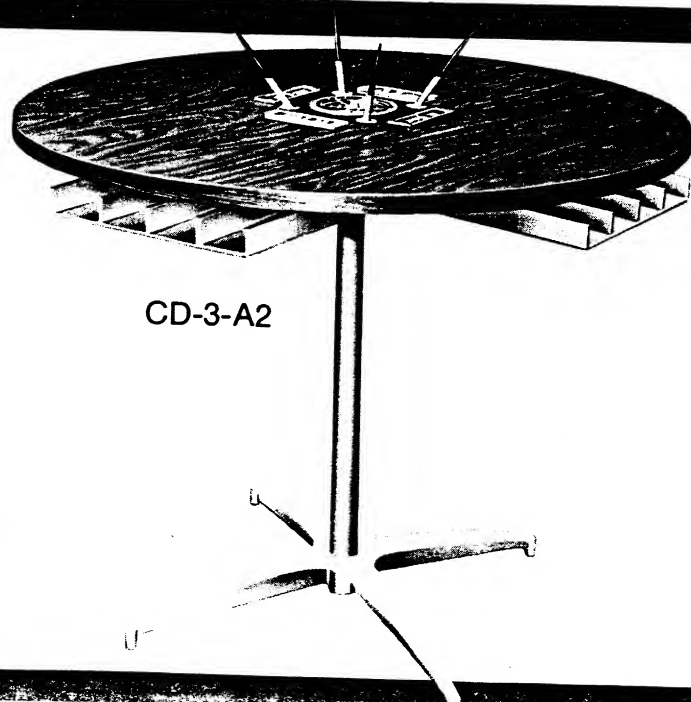

material specifications

Kerr-Changepoint check desk are constructed from a combination of solid aluminum bar, plate, castings and aluminum tubing. The tops are of 1¾" thick particle board with laminated plastic surface and edges.

The metal components and accessories are standard in brushed satin with a durable epoxy thermosetting finish. Available in clear for natural aluminum, gold, architectural bronze, stainless steel, black and medium bronze duranodic.

options

Considerable latitude is possible in dimensions, materials, finishes, accessories and accessory arrangements. Offered also are check desk components such as frames, waste drops, form trays, etc. Some of these items are listed on pages 6 and 7 of this catalog. For non-standard options please request a quotation.

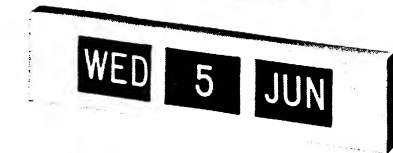

ACCESSORIES

Kerr-Changepoint fixtures are built from the most substantial materials and the best processes are utilized to assure fixtures of exceptional quality at moderate prices. Our fixtures are manufactured from wrought aluminum bar and plate, aluminum castings and extrusions. The finishes are a true brushed satin finish, coated with a durable epoxy thermosetting lacquer in natural aluminum, gold, architectural bronze, stainless steel, black or medium duranodic. The bottoms of all fixture bases are equipped with either a double faced adhesive or a non-slip cork rubber pad.

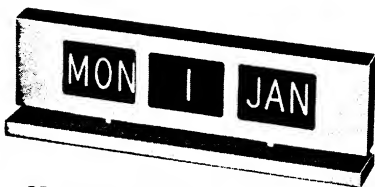

240 series

These units are unsurpassed in design, appearance and function. The bases are made from 1/2" thick aluminum bar with one piece, fixed positioned sockets. The faces are equipped with a storage compartment for a year's supply of date inserts. The faces are hinged to the calendar back casting and open out for ease in changing the date inserts, as shown in the detail.

QUALITY CONSTRUCTION FEATURES

The FLIPOUT series of calendars and signs feature a unique method of holding and changing the date inserts or name plates. The compartment holding the insert is internally milled from solid $\frac{3}{8}$ " thick aluminum bar. There is no unsightly slots at the top or end of the face. The inserts are changed through the front as shown in the cross section view. The pen sockets are one piece, fixed position. The bases are made from $\frac{1}{2}$ " thick aluminum bar.

(wall mount only)

260 series

This design series features solid $\frac{1}{4}$ " thick aluminum bases with one piece, fixed positioned pen sockets. Calendars are of extruded aluminum. The date inserts are removable by sliding out from either end. They are compact in size and their economy of construction enables them to be in an economical price range.
